Fall 2025-2026
Duration: 110 Minutes

3. (Bonus) Your oscilloscope got corrupted because of a weird malware. As a result, the display of **Channel-1** is no longer showing the original signal. Instead, it shows the **actual Channel-1 waveform multiplied by the maximum (peak) value of the signal measured on Channel-2**.

You are given MATLAB data files containing Time_s, CH1_data and CH2_data of the circuit shown below.

Using these data, recover the original Channel-1 signal and **plot $v_{in}(t)$ and $v_o(t)$ vs time on the same graph in MATLAB**. Your plot must satisfy the following requirements:

1. **Each waveform must be clearly distinguishable** by including a **legend** indicating which curve corresponds to
 - $v_{in}(t)$
 - $v_o(t)$
2. **Name** the axes. Do not forget to include units.
 - Time should be in milliseconds.
3. Add an appropriate **title** to the plot.
4. Ensure the plot is clear and readable (e.g., use grid lines).

(Show the assistant the MATLAB figure which includes your plot.)
